A **dental implant** is a surgical component that interfaces with the bone of the jaw or skull to support a dental prosthesis such as a crown, bridge, denture, facial prosthesis or to act as an orthodontic anchor. The basis for modern dental implants is a biologic process called osseointegration, in which materials such as titanium form an intimate bond to bone. The implant fixture is first placed so that it is likely to osseointegrate, then a dental prosthetic is added. The prerequisites for long-term success of osseointegrated dental implants are healthy bone and gingiva. The final prosthetic can be either fixed, where a person cannot remove the denture or teeth from their mouth, or removable, where they can remove the prosthetic. Implantology has become an indispensable part of mainstream dentistry, helping dentists to improve the quality of life of large patient populations.

Faculty

Prof. Dr. Porus S. Turner

Prof. Dr. Porus S. Turner is Professor of Postgraduate studies in the Dept. of Prosthodontics at A. B. Shetty Institute of Dental Studies, Mangalore, India. He obtained his B.D.S. degree from the University of Bombay in the year 1964 and his M.D.S. degree too from the University of Bombay in the year 1966. He is the founder member and past president of the Indian Academy of Aesthetic and Cosmetic Dentistry.

He has 26 original publications in national and international journals to his credit and has contributed to two books on dentistry. He has authored a book entitled **"Art and Science of Aesthetic Dentistry"**. Dr. Turner is a fellow of the Academy of Dentistry International and a Consultant to the Bhabha Atomic Research Center. He lectures extensively in India and abroad on Restorative Dentistry.

- He was a guest speaker at the 1st International Conference on Adhesive Dentistry held at Tokyo, Japan from 19th to 22nd April 2002.
