Dr. Aneesh Sebastian Reader, Department of OMFS has published a case report of an unusual presentation of a odontogenic tumor

Case Report

An unusual presentation of an odontogenic tumor: A diagnostic quandary

Priya Thomas¹, Aneesh Sebastian², Rekha Krishnapillai¹, Sapna Chandran³

¹Department of Oral Pathology and Microbiology, Annoor Dental College and Hospital, Ernakulam, ²Department of Oral and Maxillofacial Surgery, PMS College of Dental Science and Research, Thiruvananthapuram, ³Department of Oral Pathology and Microbiology, Mar Baselios Dental College, Kothamangalam, Kerala, India

Abstract

Squamous odontogenic tumor (SOT) is a rare benign neoplasm and may be located to multiple sites in the oral cavity mouth. As per the literature, there have been <50 reported cases. The tumor is often asymptomatic, although it can present with symptoms of pain and tooth mobility. Peripheral odontogenic tumor is a rare entity derived from either epithelial or mesenchymal portions of the tooth-forming apparatus. Lesions are common to gingiva and alveolar mucosa. Peripheral granular cell ameloblastoma (GCA) is considered to be even rarer. The purpose of the study is to report a case of SOT with a synchronous association with peripheral GCA of cystic nature in the mandible. The occurrence of SOT with ameloblastoma has not been reported as per the literature search.

Keywords: Granular cell ameloblastoma, lysosomes, peripheral ameloblastoma, squamous odontogenic tumor

PMS COLLEGE OF DENTAL SCIENCE & RESEARCH

- The faculty members, Post graduate students and 3rd year under graduate students attended the State specialty conference of Kerala Society of Oral Maxillofacial Pathologists (KSOMP) conducted on April 30th 2021.
